New Product Update

New connection for Skotch® TrifectaT500 Oil Valves is available!

ITT is pleased to announce T500 *Skotch* oil valves are now available with 1/2" socket welded union end connections. We have received numerous customer requests for socket welded union end connections, and have added this end connection to the Skotch product offering.

Now there is a quick disconnect option for the 1/2" oil valve

The new socket weld union ends will allow users to easily disconnect Skotch valves for repair or maintenance. Presently, the new socket welded union ends are available only on the 1/2" size; however, other sizes are available on request.
